MAP 2.—Part of southern Mato Grosso, showing location of Terena and Caduveo villages. The population of the important Terena villages under the control of Posts in 1946 was as follows: Bananal or Taunay, 600; Cachoeirinha, 600; Ipegue, 324; Cap. Vitorino, 183; Burity, 470 (two-thirds of which are Terena); Lalima, 183 (half of which are Terena); São João, 60 (Terena and Kinikinao mixed). The remainder of the Terena are located in independent villages like Limão Verde, Aldeia, Moreira, Passarinho, and in the penal Posts in São Paulo State. The total Terena population is estimated at 5,000. The population of the three Caduveo villages of Alves de Barros, Pitoco, and Nalique is not constant, owing to the nomadic habits of the Caduveo. The total population is estimated at 125. (For P. I. Ipegue on map, read P. I. Ipegua.)

[Post-Chaco Period] Terena

ioc is still the staple food crop, with maize and beans coming second. Rice is highly prized, but it is expensive to buy and does not grow well in this area. Manioc and raw sugar are the principal cash crops. A few head of cattle are kept, and some of the Terena drink milk. Hogs and chickens add to the flesh diet of the people. Fishing and hunting supply only a negligible amount of food.

This, in brief, is the outline of the economic history of the Terena in the last hundred years. The shifting agriculturists, hunters, and raiders of the Chaco became settled subsistence farmers upon moving into Brazil. With the coming of the railroad and the influx of settlers there has been a gradual increase in the dependence on the money economy of the Brazilians. A more exact picture of Terena economy and the relative importance of subsistence farming and dependence on commercial transactions can be obtained if we examine the economic life of a typical village.

SOURCES OF INCOME IN A TYPICAL VILLAGE

The Indian Post of Taunay[2] today has a population of 995. As this Post contains approximately one-third of the Terena population it will serve as a reasonably satisfactory sample of Terena economic life. Statistics show that families at this Post average 5 persons, which would give the Post about 200 families. Families, as a rule, have houses and lots either inside or outside the village, but all families do not cultivate farm lots outside the village. Sources-of-income study made at this Post in January 1947 revealed the following facts:

(1) About 100 men were away from the village working on ranches, on the railroad as section hands, or at various jobs in Taunay, Miranda, Aquidauana, and Campo Grande. The manager of the Post stated that 50 to 150 people are out of the Post at all times engaged in wage work. Men who work on the cattle ranches remain away from 2 weeks to 2 months, depending on the time of the year. Men who work for the railroad usually remain away for a year, often longer. If the man is married he often takes his family with him, living in quarters provided by the rail-

[2] The village is called "Betanal" by the Terena.

114 of Cachoeirinha, because this is one of the communities most
121 representative of the Terêna world, which we selected, of course,
101 after an analysis of the "survey" in question. In 1957, during the months of October and November, we returned to the field and were able to revisit seven of the eleven aldeas previously
[162] studied, including Cachoeirinha. In the following year, in July
[103] and August, we returned to Mato Gross with the aim of studying that portion of the Terêna population that, having left its communities of origin, /14/ lived in cities, such as Campo Grande,
[361] Aquidauana, and Miranda. At this time, we became acquainted with the twelfth Terêna community, known by the name of Aldeinha and situated in a suburban area of the city of Aquidauana.
114 Thus, altogether, we devoted about eight months to field research, divided in such a way as to allow for the preparation of two studies: one on O Processo de Assimilição dos Terêna, as a whole, and another referring specifically to the aldea of Cachoeirinha, set up along the lines of a "community study." As for this latter projected work, we hope to publish it some day, possibly following a new stay in the aldea, when we shall be able to ascertain the results of certain changes (2) that were foreshadowed in 1955

> 2. In a short communication (1958, b) we had the opportunity to deal at greater length with Cachoeirinha, studying it from a demographic and ecological point of view.

and that became apparent in 1957 and 1958.

114 The present essay is thus chiefly the result of the "survey"
121 referred to above, of the work of historical reconstruction (initiated in the first half of 1955), and of our third trip to the field. The data obtained in Cachoeirinha in the course of the first two trips, which were superior qualitatively and quantitatively to those gathered in the other aldeas, served as elements of comparison and control for the other material, since these last communities

/70 cont./

178 There is no question that today, as we visit Terêna com-
554 munities, we note not only a marked secularization of their institutions, but also certain modifications in the manner in which roles are attributed and professions chosen among its
[184] members. Nevertheless, such modifications did not occur to the same degree in all the local groups, although the settlement cycles and the historical episodes referred to above have
121 been common to the Terêna population as a whole. We shall
128 deal with this in the chapters that follow, where we shall endeavor to give an idea of the history of each local group in particular and to analyze the socio-cultural variations which emerge from a comparison between their communities. The historiography of interethnic relations, briefly attempted in this chapter, will serve, in the last analysis, as a backdrop before which it will become easier to understand the present-day situation in which the Terêna Indians are found.

/71/

V. Present-day Configuration of Terêna Local Groups

175 From the contents of the first chapter, we have seen that
36 immediately after the Terêna crossed over to the eastern banks
[167] of the Paraguay River, they clustered in the region that has as
[162] a center today the small city of Miranda. Already at the time
[103] of the Brazilian-Paraguayan conflict, "the Terênas, numbering perhaps more than three thousand, were settled in Naxedaxe, six leagues from the town (Miranda), in Ipegue, seven and a
[162] half, and in Aldeia Grande, three." (133) After or even during

133. Taunay, 1948:267.

the conflict--as we showed in the previous chapter--, when the local groups were broken up, the Terêna scattered through a large area, leading a chronicler at the end of the century to believe that there were some twelve to fourteen thousand Terêna Indians and a large number of aldeas. (134)

134. J. Bach, 1916:90.

/71 cont./
175 Indians and a large number of aldeas. (134) This chronicler,
361
103
342
[114]

134. J. Bach, 1916:90.

J. Bach, merely cites those he visited, namely: Agachy, Boquehina, Marro, Marrinho, Ipegue, Santana, and Caytapé; and he states that "all the aldeas present the same type of construction, which is crude, consisting of houses or ranchos with bamboo walls and roof of straw or palm leaves." (135)

135. Ibid.

103 The first difficulty we met with was in looking for the connec-
361 tion of these names, evidently regional--with the exception
174 of Ipegue and, perhaps, Caytapé--, with the tribal names
[173] attributed by the Terêna to their aldeas. We had to resort to the oral traditions of the Terêna, and we obtained the following data which we compared with those gathered by Altenfelder: (136) Imokovookoti or Bookoti, /72/ the self-denomination

136. 1949:281.

of the local group, whose survivors occupy the present-day aldea of Cachoeirinha, three leagues northeast of Miranda; Ipegue, the same local group referred to by the two chroniclers mentioned; Tuminikú, the local group that probably formed the present-day aldea of Bananal; Kamakuê, the local group that occupied the area where there today the neo-Brazilian settlement of Duque Estrada is; Háokoé, a small aldea one league from Tuminikú; Naxedaxe, already referred to by
[62] Taunay; Sinikué, a Terêna name attributed to the former aldea of Guaykuru Indians, also known as Lalima, and today populated by innumerable Terêna, Kinikinau, and Layâna families. All these aldeas were located between the cities of Miranda and Aquidauana, with a greater concentration near the former.

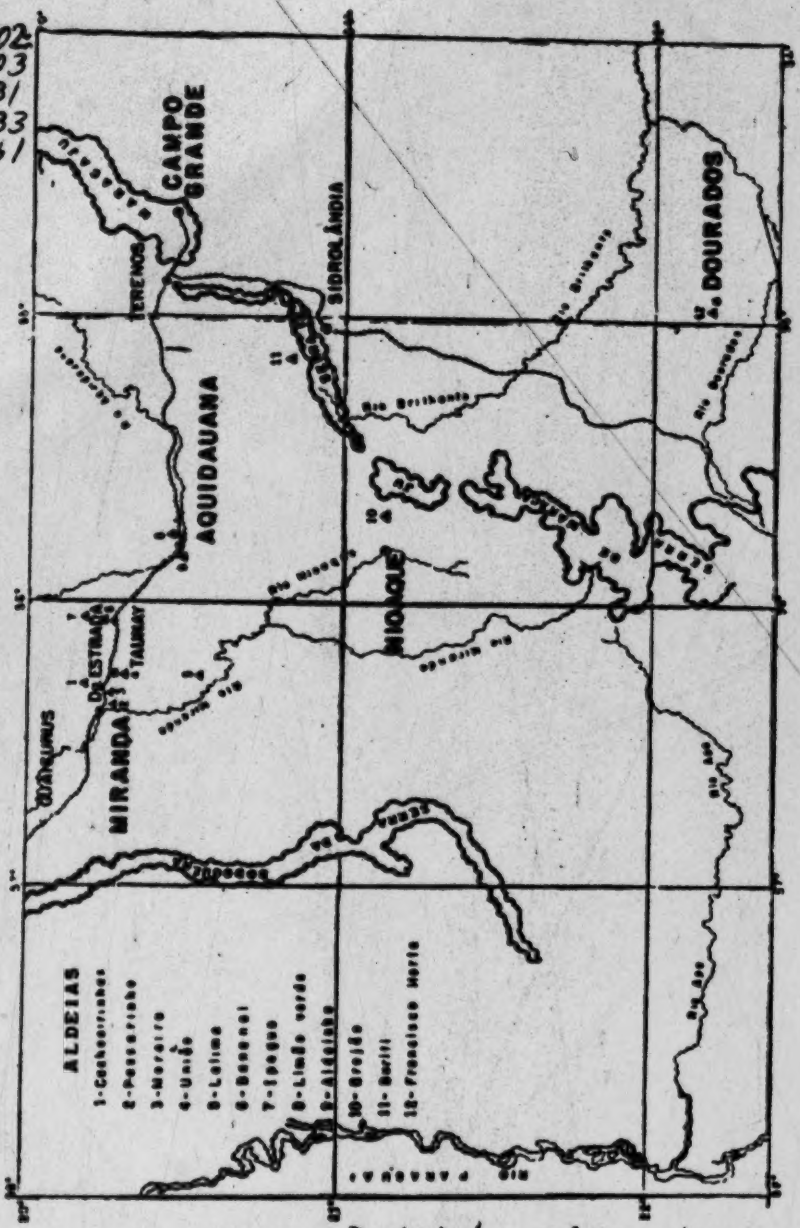

Map 2. Distribution of the aldeas

/73 cont./

361 their lands and drawing them into the colônias of the fazendas.
178 The history of interethnic relations records that a large number
648 of aldeas disappeared in the past, leading their members to
166 attach themselves to fazendas or to remain as a mobile unit,
moving from fazendas to settlements and cities, and vice versa,
128 immersed in a continuous process of detribalization. In this
chapter and in the following one we shall deal only with the
situation of the Terêna aldea population; the one that now lives
in relatively independent and stable communities, whether or
not they are under the supervision of the Serviço de Proteção
aos Índios.

361 By municípios, we can note the following: Município of
103 Miranda: Cachoeirinha, Passarinho, Moreira, União, and
Lalima; Aquidauana Município: Bananal, Ipegue, Limão Verde,
and Aldeinha; Nioac Município: Brejão; Sidrolândia Município:
162 Buriti; Dourados Município: Francisco Horta. Beside these 12
communities, which will be the subject of ecological char-
acterization in the present chapter, we might point out two
other communities which are totally or partially made up of
103 Terêna Indians. One of them, São João, in the state of Mato
Grosso, and another, Araribá (Curt Nimuendajú Native Post) in
621 São Paulo. The former, São João, within the Kadiwéu reser-
162 vation was formed by introducing Terêna families into a distant
648 part of the fazenda /retiro/ on the bank of the Aquidavão River
and close to the Bodoquena mountain range, in order to insure
ownership of those lands through settlement. The latter,
Araribá aldea, occupied by Guarani Indians, in 1932 got a few
Terêna families (about 50 individuals) whose mission was to
prod the Guarani, by their example, to the agricultural work
162 of the reservation. Nevertheless, it cannot be stated that these
are the only Terêna clusters, since a relatively high percentage
of families are still scattered among the fazendas, probably
living in their colônias, mixed in with neo-Brazilian colonos.
177 Such families, in spite of being quite disorganized--in terms
619 of the /74/ traditonal patterns--, still continue to regard
574

/88 cont./

162 In the municipio of Miranda there exist several tribes of
103 Indians, the largest of them being that of the Terena Indians, who occupy sundry aldeas, which are: Agachy, Cachoeira, Cachoeirinha, Bocaina, Ipeque, Morinha, and Santa Ana.

433 The Terena are agriculturalists and are especially engaged
28 in the making of manioc flour; in general they are very in-
323 dustrious, they weave cotton, making nets and other fabrics;
439 from the palm they braid hats, large baskets, sifters, and mats;
[241] from the pita /agave/ and other fibrous plants, the cordage for
[824] weaving bags, in which they transport their products to market; from clay they make platters, dishes, ollas, and many other vessels for domestic use. They exchange their products for beverages and fancy articles. To take their products to market they go in large groups, directed by the cacique.

142 With regard to their stature there are tall, average, and short ones. There are very few tall ones, but they are all
[165] strong and muscular. The men are very ugly for the most part, the women passable, and they attain a very advanced age.
162 The proportion of the two sexes is one-third for the male and two-thirds for the female.

291 Most of them go about completely naked and the most
177 civilized cover themselves with clothing given them by strangers.

847 Birth. They customarily kill the first child, if it is a
648 male, /89/ so that the Christians may not take it as a slave;
562 women are very much valued among them. They accompany
844 the birth of a baby with great fiestas, which always end in
[527] drunkenness.

To give birth the woman goes to the woods, where she makes an excavation about 45 centimeters long by 35 centi-
[847] meters wide, which is lined with palm leaves. In this excava-
[846] tion they give birth, and if the baby is a male they kill it at
[262] once, using the excavation itself as a grave, after which they go to the river to bathe and then submit to a rigorous diet, eating only the heart of the palm called palmita.

/89 cont./
owned, with the exception of his vesture, which is inherited by his son, who carries on in power. /90/

Over the cacique's grave they build a small rancho of palm leaves, as a mark of distinction.

Cóchómonety or Cacique. The power of the cacique falls from fathers to sons. When the first son or daughter of the cacique is born, the latter, a few moments later, breathes into the mouth of the newborn, which signifies that at the age of 15, approximately, he will receive power and will be ordained to caciqueship, following his father in power as soon as the latter dies. When the heirs reach the age of 15, the cacique holds a big fiesta, for this calling together all the caciques of the other aldeas. Dressed in a simple julata and with his entire body painted in divers colors, the boy being honored is surrounded by all the invited caciques, who form a closed circle and go around and around the young man, singing for a period of two to three hours.

When this ceremony has ended they go on to eat and drink and the fiesta lasts from two to four days, that is, until the food and drinks are exhausted.

Astronomy. Each new moon is a month and 14 moons are a year. The sun is called paphúyty; the moon calipahú-quethy; the month paphuyty; the stars perphaty; the sky piphâyty; the earth piphéytő.

Aldeas. In the municipio of Miranda there exist approximately from 12,000 to 14,000 Terena Indians and a large number of aldeas, among which I cite only those that I visited, the main ones being those called: Agachy, Boquehina, Marro, Marrinho, Ipeque, Santa Ana, and Caytapé. All the aldeas show the same type of construction, which is rustic, the houses or ranchos consisting of thin walls of bamboo with a roof of straw or palm leaves. One aldea differs from another only in the greater or lesser number of ranchos.

Agachy Aldea. This aldea has 26 ranchos, the largest being from 8 to 10 meters long by 3 to 5 meters wide; it is inhabited by 367 Indians.
